

SG1501A/SG2501A/SG3501A/SG4501

ABSOLUTE MAXIMUM RATINGS (Note 1)

Input Voltage from V+ to V-
 SG1501A, SG2501A 70V
 SG3501A, SG4501 60V
 Maximum Load Current 100mA

Operating Junction Temperature
 Hermetic (J, T, L - Packages) 150°C
 Plastic (N - Packages) 150°C
 Storage Temperature Range -65°C to 150°C
 Lead Temperature (Soldering, 10 Seconds) 300°C

Note 1. Exceeding these ratings could cause damage to the device.

THERMAL DERATING CURVES

MAXIMUM POWER DISSIPATION vs AMBIENT TEMPERATURE

MAXIMUM POWER DISSIPATION vs CASE TEMPERATURE

RECOMMENDED OPERATING CONDITIONS (Note 2)

Input Voltage from V+ to V-
 SG1501A, SG2501A 60V
 SG3501A, 4501 50V
 Output Current 0 to 50mA

Input - Output Differential (minimum) 4V
 Operating Ambient Temperature Range (T_J)
 SG1501A -55°C to 125°C
 SG2501A, SG3501A, SG4501 0°C to 70°C

Note 2. Range over which the device is functional.

ELECTRICAL SPECIFICATIONS

(Unless otherwise stated, these specifications apply for the operating ambient temperature of $T_A = 25^\circ\text{C}$, $V_{in} = \pm 20\text{V}$, $V_{out} = \pm 15\text{V}$, $I_L = 0$, $R_{sc} = 0\Omega$, $C_1 = C_2 = 0.01\mu\text{F}$, $C_3 = C_4 = 1.0\mu\text{F}$, and VOLTAGE ADJUSTMENT pin open. All specifications apply to both positive and negative sides of the regulator, either singly or together. Low duty cycle pulse testing techniques are used which maintains junction and case temperatures equal to the ambient temperature.)

Parameter	Test Conditions	SG1501A/2501A			SG3501A			SG4501			Units
		Min.	Typ.	Max.	Min.	Typ.	Max.	Min.	Typ.	Max.	
Output Voltage		14.8	15	15.2	14.5	15	15.5	14.25		15.75	V
Input Voltage				± 35			± 30			± 30	V
Input - Output Differential		2			2			2			V
Output Voltage Balance	$R_{sc} = 0, I_L = 50\text{mA}$		50	150		50	300		50	300	mV
Line Regulation	$V_{in} = 17\text{V to } V_{MAX}$, $T_A = T_{MIN} \text{ to } T_{MAX}$		4	20		4	20		4	20	mV
Load Regulation	$I_L = 0\text{mA to } 50\text{mA}$, $T_A = T_{MIN} \text{ to } T_{MAX}$		5	30		5	30		5	30	mV
Output Voltage Range	Voltage adjust circuit	10		23	10		23	10		23	V
Input Voltage Range	10V Output	12		35	12		30	12		30	V
Ripple Rejection	$f = 120\text{Hz}$		75			75			75		dB
Temperature Stability (Note 3)	$T_A = T_{MIN} \text{ to } T_{MAX}$		0.3	1.0		0.3	1.0		0.3	1.0	%
Short Circuit Current Limit	$R_{sc} = 10\Omega$		60			60			60		mA
Output Noise Voltage	$BW = 100\text{Hz to } 10\text{KHz}$		50			50			50		μV_{rms}
Positive Standby Current	$I_L = 0$		2	4		2	4		2	4	mA
Negative Standby Current	$I_L = 0$		3	5		3	5		3	5	mA
Long Term Stability			0.1			0.1			0.1		%/Khr

Note 3. These parameters, although guaranteed, are not tested in production.

TYPICAL APPLICATIONS

FIGURE 13 - HIGH CURRENT CONFIGURATION, ONE AMP OUTPUT

For full power output, the external transistors must be mounted on adequate heat sinks. Selection of power transistors may be made on the basis of current and voltage capability with low-frequency devices preferred to minimize the risk of oscillation. In this circuit, the value of R_{sc} is selected in order to protect the pass transistors rather than the IC. C_1 and C_2 are only necessary if high line impedance is present.

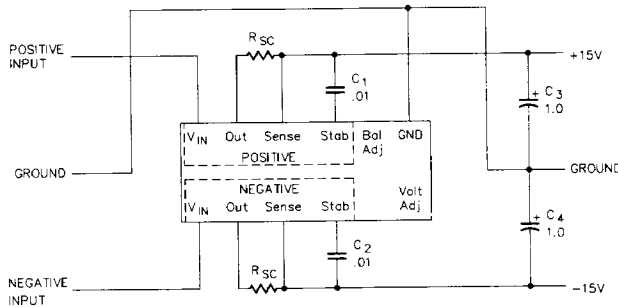

FIGURE 14 - BASIC ± 15 V, 50mA REGULATOR

Additional reduction in output noise voltage may be achieved with larger values for C_1 and C_2 although there is some loss in frequency response. C_3 and C_4 may also be increased to improve load transient characteristics. Note that the case is common to $-V_{IN}$, not ground.

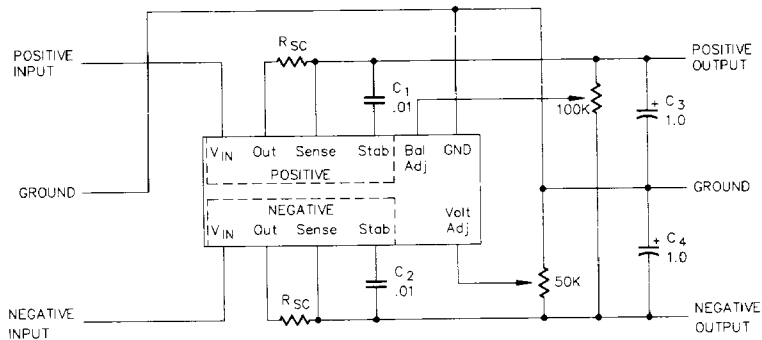

FIGURE 15 - ADJUSTMENT OF VOLTAGE LEVELS

Greater resolution may be achieved by padding each of the potentiometer with fixed resistors. Also, a single resistor, rather than a divider, may be used when adjustment in only one direction is required, but some degradation in temperature coefficient results (see temperature coefficient of output voltage curve).

SG1501A/SG2501A/SG3501A/SG4501

APPLICATION NOTE

Although the SG1501A series contains thermal limiting circuitry, the maximum current must still be controlled to allow time for this protection to react. Therefore, without external pass transistors, the minimum value for R_{sc} is three ohms. R_{sc} can, of course, have a larger value in order to protect a load.

the negative side when the device goes into current limiting. Should this be a problem, it may be eliminated by by-passing R_{sc} with a capacitor whose value is such that the time constant, $R_{sc} C$, is equal to 10×10^{-6} second. This capacitor, as well as the output capacitors, C3 and C4, must be low ESR types such as solid tantalum.

Under some conditions, a low-level oscillation may be present on
