

Features

- 700 MHz to 2700 MHz Operating Frequency
- Very Low Noise Floor Performance
- Very Good Sideband and Carrier Suppression
- Supports Wideband Baseband Input
- Very High Linearity
- Very Low LO Leakage
- 50 Ω Impedance on RF and LO Port
- Low LO Drive Requirements
- No External IF Filter
- Supply Voltage 5 V
- Small SSOP16 Package

Applications

- Infrastructure Digital Communication Systems
- GSM/TDMA/CDMA2000/W-CDMA/UMTS/ISM Band Transceivers
- RF Radio Links
- Wireless Modem Access Points
- High Performance RF Instrumentation

Electrostatic sensitive device.
Observe precautions for handling.

Description

The T0790 is a direct quadrature modulator using Atmel's Silicon-Germanium (SiGe) process.

This modulator features a frequency range of 700 to 2700 MHz with excellent carrier and sideband suppression and a very low noise floor. It operates from a single 5 V supply and provides -11 dBm of power while requiring only 0 dBm input to the integrated LO driver. An RF and an LO amplifier are also included.

The T0790 incorporates internal matching on each RF, IF and LO port to enhance ease of use and to reduce the external components required. The LO input can be driven differentially or single ended.

Pin Description

Pin	Symbol	Function
1	BBQ+	Baseband Q-axis positive input
2	VCC	Supply voltage
3	GND	Ground
4	LO_IN+	Positive local oscillator input, nominal DC voltage is 2.0 V internally biased; input should be AC-coupled
5	LO_IN-	Negative local oscillator input, nominal DC voltage is 2.0 V internally biased; input should be AC-coupled
6	GND	Ground
7	/SD	Shutdown control
8	BBI+	Baseband I-axis positive input
9	BBI-	Baseband I-axis negative input
10	VCC	Supply voltage
11	GND	Ground
12	RF_IN-	Negative RF output; nominal DC voltage is 2.4 V internally biased; input should be AC-coupled
13	RF_IN+	Positive RF output; nominal DC voltage is 2.4 V internally biased; input should be AC-coupled
14	GND	Ground
15	VCC	Supply voltage
16	BBQ-	Baseband Q-axis negative input
–	Paddle	Device ground and heat sink, requires good thermal path; RF reference plane

Absolute Maximum Ratings

Stresses beyond those listed under “Absolute Maximum Ratings” may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

All tests have been done on a testboard with LO and RF matching to 2600 MHz (see "Application Bard Schematic" description on page 10). Test in a clima chamber required long cables, which added additionall loss and affected the output power.
