### GENERAL DESCRIPTION

The WS27C256L is a performance oriented 256K UV Erasable Electrically Programmable Read Only Memory organized as 32K words x 8 bits/word. It is manufactured using an advanced CMOS technology which enables it to operate at speeds up to 120 nsecs. The memory was designed utilizing WSI's patented self-aligned split gate EPROM cell, resulting in a low power device with a very cost effective die size.

The WS27C256L 256K EPROM provides 32K of 8 bit wide code store capacity for DSP, microprocessor, and microcontroller-based systems. Its 120 nsec access time over the full Military temperature range provides the potential of no-wait state operation. And where this parameter is important, the WS27C256L provides the user with a very fast 35 nsec  $T_{OE}$  output enable time.

The WS27C256L is offered in a 28 pin 300 mil skinny CERDIP or the standard 600 mil CERDIP, and also in a 32 pad Ceramic Leadless Chip Carrier (CLLCC) for surface mount applications. All packages incorporate the standard JEDEC EPROM pinout.

### TEST LOAD (High Impedance Test Systems)

### A.C. TESTING INPUT/OUTPUT WAVEFORM

A.C. testing inputs are driven at 2.4 V for a logic "1" and 0.4 V for a logic "0." Timing measurements are made at 2.0 V for a logic "1" and 0.8 V for a logic "0".

NOTE: 7. Provide adequate decoupling capacitance as close as possible to this device to achieve the published A.C. and D.C. parameters. A 0.1 microfarad capacitor in parallel with a 0.01 microfarad capacitor connected between  $V_{CC}$  and ground is recommended. Inadequate decoupling may result in access time degradation or other transient performance failures.
